PRODUCTION TECHNOLOGY

Effectiveness and Efficiency

Before being introduced to the market and consumers, FlexOffice and Colokit's products thoroughly undergo research, technical development, testing and quality control. At every stage FlexOffice implements the most advanced technology for its production lines.

New Products Research and Development

FlexOffice's R&D platform takes a lead in strategic developing, planning in addition to the researching of new products. This enables the Company to launch dozens of variants each year; 20% of which are completely new.

Accreditation & " Green Technology "

FlexOffice has implemented 6 integrated international standards of management including:
ISO 9001 (Quality Management), ISO 14001 (Environmental Management), OHSAS 18001 (Occupational Health and Safety Management System), SA 8000 (Social Accountability), and ISO 17025 (Calibration and Testing Laboratories Control) and ICTI (International Council of Toy Industries).

Coloring Product and Children Orientated Lines are certified to meet the following non-toxic/ safety measures:
- European Standard: EN-71 Part 3; EN-71 Part 9
- American Standard: ASTM D-4236

CE   AP Conforms to ASTM D 4236

FlexOffice ensures employees work in a safe, clean and comfortable environment whilst delivering standard leading products for the global market. At Thien Long Group, we believe that monitoring the environmental actions by implementing "Green Technology" is the best way for sustainable development. The Company's "Green Technology" includes using renewable energy together with energy-saving machinery/ equipment and reducing waste by improving the wastewater treatment systems and waste management in accordance with the appropriate standards.

Especially, Thien Long Group is also the first stationery company in Vietnam that has successfully applied the Solar Energy Technology in manufacturing all Colokit's products. With the constructing of brand new factory operating by solar panel system, all school supplies and art supplies such as Crayons, Oil pastels and many more are now produced by using safe, clean and environment - friendly energy.

GENERAL DIRECTIONS FOR PRESERVING, EXHIBITING AND TRANSPORTING PRODUCTS

1. Conditions on storing and preserving products:
- Ideal temperature 10ºC to 25ºC, humidity 40% to 80%
- Conditions for limited and controlled storage: 0ºC to 9ºC and 26ºC to 37ºC, humidity > 80%

2. Products must be stacked the right way up and to the maximum number of layers as indicated.

3. Products must be classified subject to area and type for easy pickup and ensuring compliance with FIFO (First-in-first-out).

4. Keep products away from dirt, rain, nearby heat sources and Power source.

5. Keep products away from direct sunlight.

Products are stacked to the correct maximum (6 layers) but in the some boxes are upside down

You may reflect product quality at the following: Products stowed in an area with direct sunlight

SPECIAL DIRECTIONS FOR PRESERVING, EXHIBITING AND TRANSPORTING PRODUCTS

1. Special directions for Gel pen:
Pens must be always being covered during storage and display. Avoid strong vibrations during transport and keep far away from heat sources at all times.

2. Special directions for Butter Gel and BIZNER premium pens:
Make sure that the pen is always protected by hot melt and air tight during storage and display.

3. Special directions for correction pen product:
During storage, transportation and display of the correction pen, it is required to ensure that boxes are stored the correct way up, because if the pen tip remains vertically downward for a long time, it will become blocked and no ink will be dispensed.

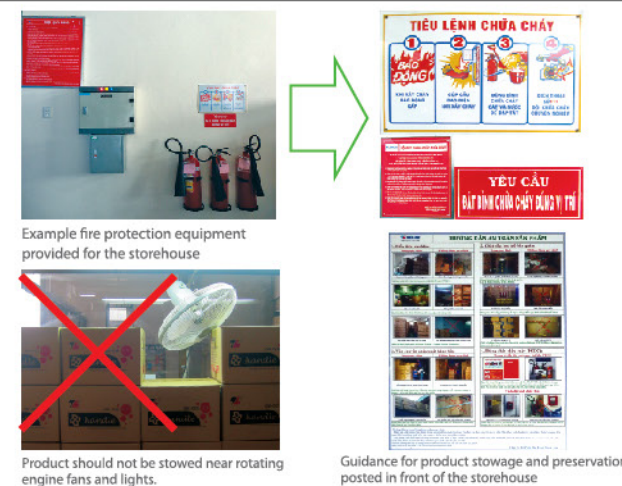

Correction pens incorrectly stowed in the storehouse, not as indicated on the box

Correction pens on display, upside down.

SPECIAL DIRECTIONS FOR PRESERVING, EXHIBITING AND TRANSPORTING PRODUCTS

1. Special directions for white board marker product:
Always store the pen horizontally, do not put the pen in upward or downward direction as it can cause the ink to pool.

2. Special directions for the group of wax pen products:
Do not store, stow, transport and display wax at place of temperature more than 37ºC for an extended period. It can cause the wax products to soften, deform and reduce their quality.

3. Special directions for watercolor product, ink pot of white board marker, permanent marker ink and fountain-pen ink: Stowage must be the right direction to avoid the risk of falling, smudging outside the lid or otherwise damaging the product. In particular, the Inkpots and permanent markers should be kept far from heat sources.

WB03 White Board Marker displayed properly

WB03 White Board Marker displayed improperly.

DIRECTIONS RELATED TO THE STOREHOUSE

1. Provide full fire protection equipment in accordance with local regulations.

2. The Guidance info for product stowage and preservation must be posted in the storehouse

3. Stow the products on shelves with a minimum distance from any wall of at least 10 cm. Touching the wall can lead to mould and termite damage.

4. The main walkway is to be at least 1.2m distance between 2 aisles and auxiliary walkway to be 0.5m minimum: This ensures easy pickup, timely response to emergency situations such as fire and explosion.

5. For odd commodities that must be stowed on shelves/brackets in a succinct manner, avoid dirt, dents, and damages to the packaging, arrange by product code, color and date for easy export/import, and good control of FIFO.

6. Stowed commodities to be away from light, electric socket and engine fan, minimum distance of 0.5m. Power line has to be correctly insulated and incandescent light bulbs are not to be used in the storehouse.

Example fire protection equipment provided for the storehouse

Product should not be stowed near rotating engine fans and lights.

Guidance for product stowage and preservation posted in front of the storehouse

SPECIAL DIRECTIONS FOR STOWING AND TRANSPORTING PRODUCTS

1. Make sure that the products are stowed in the right direction as specified on container during transportation, away from rain, away from heat sources, not subject to direct sunlight and not stowed against the vehicle/container ceiling which can reach a temperature higher than regulated temperature.

2. It is necessary to avoid vibration when stowing/loading product and do not trample on product containers.

3. Do not stow product alongside smelly, contaminating goods (for example: fish sauce, fish, etc.)

An employee is not operating as directed when loading the commodity onto the vehicle
